## DETAILED ACTION

### *Allowable Subject Matter*

1. The following is an examiner's statement of reasons for allowance: the claims recite a screwdriver comprising a combination of a power source, a light source, a positive & negative plate, a positive & negative ring being respectively connected and an annular switch rotatably mounted to the light frame and including a touch piece, which contacts both of the positive plate and the extensions of the positive ring to light the at least one light source.

The prior art to Shiao (USPN 6,179,433) discloses a screwdriver (Figure 2), a power source (35), a positive plate (341), a negative plate (342), a negative ring (37), a positive ring (331), however the reference does not teach an annular switch member.

The prior art to Shin (USPN 5,205,640) discloses a rotary switch means where the means being operated by rotating the head assembly relative to the casing wherein the first contact means contacts the second contact means at a predetermined circumferential location irrespective of the direction of rotation of the head assembly.

There is no motivation to combine teachings of Shiao & Shin where an annular switch with a touch piece which contacts both of the positive plate and the extension of positive ring to the light source, therefore the claims are deemed patentable over the prior art of record. Claims 1-13 are allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***
